Portfolio piece #1. Create a Professional Statement

I'm currently studying cybersecurity and enjoy tackling real-world problems, especially when it comes to keeping systems and data safe. Through my AP cybersecurity course, earning the Google Cybersecurity certification, hands-on experience with manufacturing automation, and personal security projects, I've built a solid foundation in areas like digital forensics, network defense, and secure coding. I'm driven by the challenge of staying ahead of threats and want to use my skills to help protect both people and organizations.
